Spinel with Calcite - Mogok, BURMA 5.2 x 4.5 cm.

Barcelona 02/10/2013

The 50th edition of the Munich Show has arrived and for this "golden" edition the topic will be, of course, Gold. Golden also will be our display with a large suite of specimens from the Huanggang Mine, China, new gemmy Fluorites from the Llamas Quarry, Spain, a selection of Moroccan novelties from Ste. Marie 2013, several new collections, mainly from Spain, with many European classics, and our great acquisition, the Panasqueira collection of Alain Martaud. Brand new for Mineralientage 2013 this collection contains over 100 specimens from the Panasqueira Mine including a lovely suite of Alain's purchases from this mine over 25 years, with many of these specimens photographed and described in European magazines.

As usual add to all this a few surprises and several major worldwide specimens, so in Munich you will find what will be our "Gold" in this golden 50th edition of Mineralientage!

See you in our stand A6.431 or on line through our chronicles during the show at www.mineral-forum.com

Mineralogical Greetings

Jordi Fabre
