Fluorite - Sichuan, China  
Crystal: 2.7 x 2.6 cm.

Barcelona 01/06/2012

The Ste Marie Show has changed and simultaneously not changed ;-). The organization is no longer the Mineral Concepts (Michel Schwab) and the new organizer for this year is the municipality of Ste Marie, but the Fair is still held in its historic site, downtown in the village of Ste Marie. We'll see what happens.

As in previous years we will be reporting from there what happens through our regular reports that, as usual, will be published in: <http://www.mineral-forum.com>

As we announced last year, we no longer sell in Ste Marie due to the volume of our activities that do not allow us time to prepare properly a Show as complex as Ste. Marie, but like last year we will be there, chatting with some and seeing what's new in the mineral world.

From our side, currently our main news is that we can announce our purchase of a major part of the important collection of James Catmur, and that we will offer the specimens of this collection online and at the Munich Show together with a wide representation of diversified specimens from the prolific area of Huangang (Inner Mongolia, China)
