Fluorapatite - Panasqueira

7.4 × 5.9 × 4.6 cm

Opal - Zacatecas, MEXICO

4.6 × 4.2 × 2.4 cm

Barcelona 01/10/2014

For one more year the Munich Show's meeting point approaches. Currently the two largest shows in the world are Munich and Tucson and more and more both are essential to getting an overview of what is happening in our hobby. So both are "must go" options since most of the main collectors and others involved in mineralogy will be there, all together in a single spot and for many days... We will participate in this feast by displaying at our regular stand A6.431 located just in front of the International Mineral Pavilion.

This year we will offer a large selection of colorful daylight fluorescent Opals from Mexico, as well as a large suite of specimens from China, new gemmy fluorites from the Llamas Quarry, Spain, and a fine suite of Panasqueira specimens from new finds there. Also a selection of novelties from Tucson and Ste. Marie 2014, and a few new collections with plenty of classic specimens.

Add to all this a few surprises and several major worldwide specimens, so don't miss connecting with us at Munich to share our common passion for minerals and mineralogy!

See you at our stand A6.431 or on line through our chronicles after the show at:
