

## SAINTE-MARIE-AUX-MINES

22 - 25 June 2017

Volborthite with Brochantite - Mexico 3.1 × 1.9 cm

Bismuth - Niederschlema, Germany 4.2 × 3.4 cm

Vanadinite - Mibladen, Morocco 5.9 × 3 cm

Barcelona, June 6, 2017

This year Ste. Marie catches us in very good shape. We have just bought three Spanish collections, two of them significant, especially one of them: the legendary Lluís Daunis collection from Barcelona. But not only this, we will also have with us a private Colombian collection of Golds from that country as well as several novelties: Cronstedtites from Morocco, new Chalcostibites of Rhar el Anz with large crystals that are more defined and more colorful than usual. Also some more material from Morocco, like very good Djurleites from the Aït Ahmane Mine.

However, despite all this, what we believe will be the real "hit" this year will be the extraordinary pocket that was recently found in the Llamas Quarry, Asturias, Spain. Crystals of 2 cm or more, on matrix, forming large or very large groups and with the extraordinary quality of the best Fluorites from the locality. A really cool thing

If you are planning to visit Ste. Marie this year, do not hesitate to come and see us at our booth in the entrance of the "Espace Piscine". You will easily find us and you will be refreshed thanks to the natural cooling provided by the swimming pool 😊

Vive Ste. Marie!

Jordi Fabre

Gold - Serra do Caldeirão, Brazil 2.2 × 1.7 cm

Spinel on Calcite - Mogok, Burma Crystal: 3 × 1.7 cm
